Instruction
Model: RMC610

The REMOCON Remote Control can duplicate a majority of fixed code remote control in which set the fixed frequency at 433.92MHz. This means that each time the remote control is pressed, the same code is transmitted each time.
It is not possible to copy any remote that utilizes Code Hopping or Anti-Code Grabbing Technology. This is because these types of remotes send a different code each time the remote is pressed.
The remote has four buttons so that it will universally suit most alarms i.e. some remotes have just one button for arming/disarming, where others may have separate buttons for multiple functions. The same code can be copied onto multiple buttons if desired. If your original remote has a function controlled by pressing multiple buttons together, you must duplicate that code to a single button on your REMOCON. You can also copy multiple remotes onto the one REMOCON, provided they all operate on the same frequency.

PROCEDURE TO DUPLICATE YOUR REMOTE:

1. Place the REMOCON and original transmitter right next to one another. On a flat non-metallic surface.
2. Press & hold down the button on the original remote that you wish to program onto button 1 on the REMOCON, and then press & hold down button 1 on the REMOCON Remote. The REMOCON light should glow. Hold both buttons down until you see the light pulse three times. This should only take a few seconds. If you do not see the three pulses, you have not successfully duplicated the code from the original remote.
3. Repeat step 2 for buttons 2, 3, & 4 on the REMOCON if required.
4. Open the case of the REMOCON.
5. Remove Jumper 1 near the battery. The remote will now transmit.

6. Replace the case and screw closed. Do not over tighten. The procedure is now complete.
